

The First 2000 Years of Computing

March 21, 2015 PAARAtrip

Put your NERD HATS on, we are going to the Computer History Museum. Learn about the first 2000 years of computing. There are many old, newer, and unusual computer related exhibits. We will get a private demonstration of the IBM 1401 CPU operation and a bonus. The 1401 CPU emits RF noise that can be detected with an AM radio. The museum is working on a demonstration to send QRM CW via the CPU. What a treat that will be. The tour will be docent lead in groups of about 20. Plan on about 2 to 3 hours. Entrance will be \$10 per person. Please pay Marty Wayne, 1039 Bryant Way, Sunnyvale CA.

The date and time:

Saturday, March 21. Tour will start promptly at 10 AM.

This is a drive yourself trip. There is plenty of parking but car pooling would be more fun. The Computer History Museum is located at:

1401 N. Shoreline Blvd

(is the address and the IBM 1401 computer a coincidence?).

Mountain View CA 94043
