

#### PAARA NEWSLETTER VOLUME 47 NUMBER 6 June 1998

# PAARAgraphs

Celebrating 61 years as a *real* ham radio club—Since 1937
Newsletter for the Palo Alto Amateur Radio Association, Inc.

### **CALENDAR**

June.....5, PAARA Meeting, 7:30
Menlo Park Recreation Center

700 Alma Street, Menlo Park 7:30-9:30 PM June....10, PAARA Board Meeting, 7:30

Bakers Square Rest., 949 Veterans Blvd., Redwood City (Tempory until Red Cross building repairs flood damage)

June....13, PAARA day at Foothill Flea Market

June...27, 28 PAARA ARRL Field Day

(for info see Ponderings)

July....10, PAARA Meeting, 7:30

July.....15, PAARA Board Meeting, 7:30

Aug.....7, PAARA Meeting, 7:30

Aug.....12, PAARA Board Meeting, 7:30

## **PROGRAM**

June 5, 1998

Speaker:

Sam Vigil, WA6NGH

"DX-pedition in United Kingdom"

PAARA Radio NET every Monday evening at 8:30 P.M., local time on the 145.230 -600 MHz repeater, PL tone off

#### VE & A Little DX

Asaturday, May 16, 1998 our VE session was held as always, in Redwood City at the American Legion Hall. We had the usual number of persons taking tests, with 3 taking the extra. On hand to help run the session were: Joe Horne Sr. KB6OWG, Dan Curry WB6STW, Gene Ira-

zarry KK6LO, Bill Sooman WB6UVO, Ron Panton W6VG, and the much appreciated help of Al Montoya WB6IMX. The ham bands have really come to life, with even 10 meters showing ZL, VK, KH6, and 4 South American countries. These were of course on my favorite mode, CW. It looks like we will have more ham exams given by the VE with the increase in the sun spot numbers. 15 is also looking good, but remember 10 is for really good DX, keep listening. I always check out the beacons first to see how propagation is. On 10 listen around 28,199 MHz and on 15 around 21,150. My calibration is not right on, so I have to tune around the beacon advertised frequencies.

-Ron, W6VG

# PAARA PONDERINGS de VIC BLACK, AB6SO

. Mark your calendars so you'll be ready for a very busy month in June.

Saturday the 13<sup>th</sup> PAARA will host the Foothill College Flea Market. This premier club fund raiser is worthy of your support. This may be the first Flea Market of the year with really good weather so it's expected to be a big one. Help is needed with food concession set up, sales and clean up as well as vendor site sales.

ARRL Field Day is the weekend of the 27<sup>th</sup> and 28<sup>th</sup>. Preliminary setup will begin on Friday, the 26<sup>th</sup>. Help is needed for set up, operating, logging, food preparation, and cleanup (Continued on page 51)Ponderings

#### WEB WANDERINGS

de Vic Black, AB6SO

Late last year Tech America featured a one month special on the Alinco DJ-S11T and DJ-S41T transceivers at \$88 each. These little 2 meter and 70cm FM monobanders, powered by 3 AA alkaline cells, fit into your shirt pocket

and run about 300 milliwatts. Later, HRO matched the price and now sells them at a permanently low price of \$88 each. Fry's Electronics sells the 2 meter version for \$89 and the 70 cm rig for slightly over \$100. Performance suffers somewhat because the antenna is inefficient and can't be changed. Now there's a way to modify the radios to replace the antenna with a ninety degree SMA connector to allow use of a more efficient antenna. With the SMA connector, you could even operate into a large Yagi. Sunnyvale's Andy Fu AC6GN does an excellent job of showing the simple mod at http://hamradio.maill.com/alinco. (Note: that's mail followed by the numeral 1, not maill). If you're lazy (errr\_I mean busy), you can buy a mod kit from Andy, or he will modify the radio for you. See his web page for details.

PAARA's May speaker, **Dennis Franklin K6DF** from Fremont, spoke about operation by the Pampanito Amateur Radio Club aboard the restored World War II submarine USS Pampanito SS-383, berthed at San Francisco's Pier 45. Dennis' excellent web site at http://members.home.net/k6df describes amateur operations aboard the Pampanito and aircraft carriers USS Hornet and USS Carl Vinson (imagine a steel ground plane covering several acres mounted 75 feet above salt water with no hills nearby to distort your antenna pattern). The **Pampanito ARC NJ6VT** web site has further information and links about shipboard ham radio at http://ns1. qsl.net/nj6vt/index/html. The web sites have operating schedules for working the station on the air. You may also call ahead to arrange to actually operate from the Pampanito as a guest operator.

There are many Web sites available which allow you to check the weather before you travel this summer. Here are several that are tested and are good for local conditions. These have NOAA and National Weather Service severe storm warnings and flash flood watches. Some also have earthquake reports.

San Francisco Bay Area Weather is shown at http://www.wco.com/~paulg/weather.html. This was recommended by the San Carlos Police Department. It includes all of the local TV station reports, weather cameras around the Bay and local reporting stations located at area schools, Lawrence Hall of Science, San Jose Tech Museum, etc.

West Coast weather including radar images can be found at http://www.foxweather.com. World wide weather, including the Bay Area is available from http://cirrus.sprl.umich.edu/wxnet. Nice color satellite and radar images. For quick interactive links to weather checks by city (just type in your city or

ZIP code), see http://wunderground.com. This is a part of the University of Michigan Weather Underground Project listed above.

Before traveling around the Bay you may check traffic conditions at www.scubed.com/yahootraffic/SF/SC/map .html. Click on the area you're interested in and the map will show the current traffic speed supplied by inductive loops imbedded in the freeways.

While traveling this summer, you may want to consider becoming active in the USA Counties Award activities. The objective of county hunting is to work stations in all of the 3076 counties within the United States. The United University of Michigan Weather Underground Project listed above.

Before traveling around the Bay you may check traffic conditions at www.scubed.com/yahootraffic/SF/SC/map .html. Click on the area you're interested in and the map will show the current traffic speed supplied by inductive loops imbedded in the freeways.

While traveling this summer, you may want to consider becoming active in the USA Counties Award activities. The objective of county hunting is to work stations in all of the 3076 counties within the United States. The United States of America Counties Award (USA-CA) is maintained by CQ Magazine with specialty awards provided by Mobile Amateur Radio Awards Club (MARAC). Several nets operate for the express purpose of providing the greatest opportunity to contact counties. Many long-haul truck drivers engage in county hunting as do vacationers by detouring through "rare" counties to provide contacts---a sort of mini DXpedition. I have one QSL card from Mississippi proudly marked "The only ham in this county". For more information about this interesting pastime go to http://www.delve.com/ch/index.html.

Go to http://www.pe.net/~dopplers/links.htm for nearly 75 links to radio direction finding. **Ed Greany KB6DOL** has information for buying, building and operating all kinds of DF equipment. Direction finding can be a casual pastime, a competitive international sport or a serious life saving radio technique. There may be something here for you. Effective equipment can be made with little more than PVC pipe or wood strips and some straightened clothes hangers. (Keep some duct tape handy for emergencies).

Joe Leggio WB2HOL has some fun, effective, instructive and easy to build DF projects at http://home.att.net/~jleggio/projects/rdf/rdf.htm. I especially like the 2 and 3 element beams made from PVC pipe and steel "tape measure" elements. Since the elements are flexible, but self supporting, you can store the antenna by poking the boom into a tube and the elements will fold back along the boom. For use, just pull the boom out of the tube and the elements spring back into position. Joe's page also has excellent articles on building 40 and 750 milliwatt fox transmitters using perf board and a few parts from Radio Shack. His minimized 555 time-difference-of-arrival (TDOA) RDF unit is very effective and easy to build. This is also a good source of information about passive and active attenuators.

Celebrating 61 years as a real ham radio club-Since 1937

### PROGRAM NOTES:

PAARA Program, May 1, 1998

- Steve Stuntz, K6FS

Our program of Friday, May first, was presented to a less-than-packed but enthusiastic audience (rest of the gang

must have been weaving garlands around somebody's Maypole elsewhere) by Dennis Franklin, K6DF, of Fremont. Dennis, a member of the Pampanito Amateur Radio Club, San Francisco, took us on a masterfully videotaped walking tour of the World-War II submarine, USS Pampanito, SS-383. Now permanently docked at Pier 45, San Francisco, as part of the National Maritime Museum's floating displays, after being dedicated a "national historic landmark" on November- 14, 1986 (according to San Francisco Chronicle, Saturday, November 15. 1986). Open for public visiting, Pampanito was a Balao-class vessel, launched at Portsmouth, NH, Naval Shipyard, in 1943, and assigned to the Pacific Fleet, where she saw action in six war patrols, on one of which, under the command of Lt. Cdr. P. E. Summers, she sank the Japanese transport Kachidoki Maru carrying US and Australian POW's, rescuing 73, (Cited in Roscoe, Theodore: Submarine Operations in World War II, US Naval Institute. 1949, p358.)

On his video tour of *Pampanito*, Dennis took us literally from stem to stern, showing in detail engine. maneuvering and radio rooms, crew's and officers quarters, torpedo rooms, fore (six tubes) and aft (four tubes), control room and conning tower - and noted that the original radio equipment is maintained in working condition, and is exercised from time to time (where in the world do they get replacement tubes? "Solid state" was an unknown phrase in 1943) by members of the Club.

Of particular interest was Dennis' description of the radio room as a "two-man-size closet", barely habitable when in full operation due to heat emitted by the oversize "jugs" in the TBL-7 HF transmitter capable of 50 (fifty) watts AM, 200 watts CW, originally powered by the ship's 120-volt DC supply. This rig is still operable, along with the original complement of receivers and frequency meter (used for heterodyne spot-tuning the otherwise uncalibrated receivers! However, the radio room now houses a 100-watt Yaesu FT-890 transceiver, which by means of an SGC ST-230 automatic tuner covers all HF amateur bands, using an updated version of the ship's original antenna - a coax-fed 115-foot longwire stretching from a feed-through bowl insulator on the port side of the conning-tower to a jack-staff near the stern. Signal reports from distant stations routinely run "10 over S9", Considering that the effective ground-plane is all of San Francisco Bay, this is no surprise!

The old ship's diesel engines are regularly exercised by members of the volunteer crew, most ex-Navy. They no longer drive generators to produce propulsion and battery-charging power; the batteries were removed long ago, and replaced by rock ballast to keep the vessel in trim.

The **Pampanito Amateur Radio Club** was formed about a year ago, and has 14 members at present, all but one exmilitary. It operates under the call-sign **NJ6VT**, an adaptation (amateurization?) of the ship's original Navy call, **NJVT**. The station is regularly on the air every Wednesday and Sunday, 2600Z to 2000Z, on the following frequencies: SSB - 7.244, 18.137, 21.333, and 28.400 MHz; CW - 7.144, 14.058, and 21.150 MHz.

Incidentally, *Pampanito* participated in "Submarines on the Air", a special commemorative event, announced in April QST, during the April 25-26 weekend, accompanying some three dozen similar submarine memorials around the U. S. (Note: HF propagation over that weekend was terrible - ed.)

To cap off his presentation, Dennis took us on a video-taped "Tiger" cruise aboard the aircraft carrier Carl T. Vinson from Pearl Harbor to Alameda in November of 1996. Although not concerned primarily with amateur radio, this trip afforded opportunity for some dramatic video shots of flight-deck action, launching and recovering F-14's and F-18's. However, by exerting his persuasive charm, Dennis was permitted access to the on-board ham station, signing "K6FD Navy maritime mobile region 2". He was forbidden to be more specific about the type or name of the ship, or its QTH. Relinquishing the camera, Dennis permitted himself to be photographed working the rig, exchanging signal reports and pleasantries with hams around the Pacific Basin.

PAARA is indebted to Dennis for a well-thought-out use of nonprofessional video in an excellent presentation accompanied by lively commentary, and to our vice president, **Dave Bailey**, **WS6W**, for locating and inviting Dennis to favor us with his program. Also note that this is the first truly extensive workout PAARA's new VTR-monitor system has received.

#### **FLASH**

\*\*\*\*\*\*

The following **Special Event** announcement will appear in July QST, and also in an upcoming issue of World Radio:

"Mountain View. CA: Pale Alto Amateur Radio Assn., N6M, 1600-2400Z, July 12. Honoring the men and women of the 129<sup>th</sup> Search and Rescue Wing, CA Air National Guard. 7.250, 14.250, 21.350, 28.350.

SASE for certificate:

PAARA, P.O.Box 911, Menlo Park, CA 94026."
PLEASE NOTE THE
SPECIAL-EVENT 1X1 CALL:

#### "NOVEMBER SIX MIKE"

Rigs for the above frequencies, plus 6 meters and VHF/UHF, will operate at the recreation and picnic area, south of the former Navy housing tract, Moffett Federal Air Field. Come and enjoy the fun, meet the troops, and help demonstrate ham radio!

More later.

(Continued from page 47) Wanderingss

Joe Moell KOOV co-authored with Tom Curlee WB6UZZ the textbook "TRANSMITTER HUNTING---Radio Direction Finding Simplified". Joe has written over 110 magazine articles on direction finding and recently wrote a chapter on RDF for The ARRL Handbook as Technical Advisor to the ARRL. In February the ARRL appointed Joe the US's first ARDF Coordinator to promote international-style foxhunting. Joe's comprehensive web site is at http://www.members.aol.com/ hom ingin/index.html.

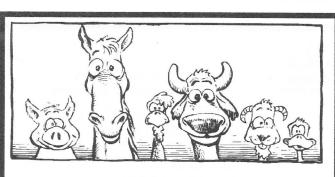

DXpedition of the month is the Svalbard DXpedition to Longyearbyen-Spitsberg, IOTA island EU-026. Spitsbergen Island is located approximately 15 degrees East and 80 degrees North. This Norwegian Arctic island will be activated by JW9PJA from 12 June through 16 June. Summer is expected to occur sometime during those five days on Spitsgbergen. Operation will be on 160 through 6 meters and will include CW, SSB, RTTY, SSTV plus RS12 & RS15 satellites. Try the home page at http://ho me.sol.no/~la9pja/jw98.htm.

The motto of the Arizona ScQRPions QRP club: "If it ain't fun, you ain't doin' it right!" :-). @@@

#### THE WAY IT WAS

#### ☐ Charlie Grandjean, WD6FAF

Again reflecting on my teenage years in the early '30s, I realize that because we had only the print media, radio and movie newsreels as our primary sources of local, national and world events, shortwave radio

was captivating my interest as another fascinating window on the world. Ham radio offered many interesting OSOs revealing the activities, location, WX conditions, occupations of the participants, and trivia of an entertaining or informative content.

Heard on 20 meter AM 'phone during late evening hours was J. Poy Hunt, A.S.C., W6CNE at Canoga Park, Calif.. who in QSO's with contacts in the Territory of Hawaii (not a state, yet!) told of his trip to Brazil to do background photography used by RKO studios in the first Fred Astaire-Ginger Rogers film, "Flying Down to Rio". When today you see RKO movies from that era, in some of them the credits will include J. Roy Hunt, a member of the American Society of Cameramen, "A.S.C."

One call of a ham remembered for his location and the "twang" in his speech is W5BDB heard from Texarkana, Arkansas. Content of his QSOs and calls of stations he contacted are now forgotten,

Other calls heard at my home in Oakland included W61T ("I, Indiana, T, Texas"), Jack Tait: W6TT ("T as in this, T as in that, or, alternatively, "T, tonsillitis, T, tuberculosis"), Elvin Fiege; W6DUB, (""the dub station in Oakland"), Mario Chirone. ELvin and MARio later acquired Electric Supply Company where I at times had purchased the few parts and receiving tubes I could afford for my limited radio projects. ELMAR Electronics operated by these hams did well, ultimately being sold by them to Wylie Laboratories now in Santa Clara.

#### PAARAgraphs Ad Rates

PAARAgraphs accepts paid advertisements from non-members. (short personal ads remain free for members in good standing). All ad rates listed are per issue only.

1. Not for profit ads by association members for ham-related items and wants. No cost for business card size ads (additional space at \$2.50 per business card size).

2. For Profit organizations and/or individuals: \$5-business card size, \$25-half page, \$50 full

These fees may be reduced or waived in exchange for a valuable consideration that is given to the Association or its general membership. Such consideration must be in addition to any existing arrangements with the association.

The PAARAgraphs editors reserve the right to reject any ad deemed to be not in the best interest of the Association. All fees are for "scanner-ready" copy or text-only ads.

PAARA 7:30 June 5th 命 

PAARA PRIDE wear your

PAARA Badge

meetings, picnics, field days, winter parties, ham fests, flea markets, Pacificons... (if you need one, contact Fred, K6YT)

(Continued from page 45) Ponderings

and tear down. Everyone can operate including unlicensed third party operators so long as there is a fully licensed control operator in charge. Novices are needed for a Novice station including 10 meters phone. More than half of all US hams have never operated during a sunspot high. We are now starting a new sunspot cycle and propagation promises to be especially good for Field Day. (Just to make sure, PAARA has commissioned a wizard to "salt" the ionosphere especially for this event.) Come out and enjoy the thrills of operating from a field location during a major contest.

Special 1 X 1 callsign N6M (for National Guard, Moffett) is assigned to PAARA for use at our Special Event Station Sunday, July 12 to honor the 129<sup>th</sup>th Rescue Wing of the California Air National Guard at Moffett Field Federal Air Station in Mountain View. Steve Stuntz K6FS has done a fine job arranging the activity which will highlight amateur radio capabilities at the annual Guard picnic for the rescue wing employees and their families. Several thousand people will be able to witness amateur radio first hand.

Operators are needed for all frequencies. This is your chance to experience the thrill of being on the receiving end of a pile up using an exotic callsign. This is also a fine opportunity for Tech and Tech Plus third party SSB operators to work HF DX without the competitive pressures of Field Day. The Special Event coincides with the IARU HF World Championship and overlaps the end of the CQ World-Wide VHF Contest so we're expecting the operations to be very popular.

The Rescue Wing has about 2000 employees, but not a single ham operator. The wing is automatically activated in case of a magnitude 7 or greater earthquake. Most of the employees live in the San Joaquin Valley so emergency communications between the base and the employees' homes is a major concern for the base management. As a public service, PAARA is coordinating activities with the base Commander and the Communications Officer with the ultimate goal of holding a new ham class to license members of the wing.

See June QST for an article about former PAARA member Lars Karlson AA6IW. Lars has provided satellite communications for PAARA Field Days in the past. He has been concentrating his amateur radio activities on microwaves and in December Lars and Wil Jensby W0EOM from Santa Clara set a US distance record for 78 GHz communications. June CQ VHF has a nice photo of Lars with his portable station using an 18 inch parabolic reflector antenna. One end of the record setting contact was at the local "secret" VHF/UHF operating position located at Redwood City's Canada College northern parking lot.

The 78 GHz band is difficult to work because of a lack of equipment, but this will change very soon. The 5,500 MHz wide(!!) band will be shared with short range collision avoidance radar meant to warn car drivers when they approach another vehicle since visual flight rules don't seem to work well enough on freeways. New cars will have front and rear looking radar as well as side looking radar to warn drivers who don't look where they are going. Radar is expected to be a boon to

drivers who parallel park by ear. The radar sets will be very inexpensive when mass produced and will make excellent ham station building blocks. Ultimately, a lot of the systems, complete with transmitters, receivers and antennas, will be available in junk yards, perhaps put there by drivers who relied too heavily on them.

Severe weather hit the peninsula again on May 4 with torrential rain, hail, lightning strikes and tornadoes touching down in Sunnyvale and Los Altos. The last time Sunnyvale had a large tornado was in 1951 when a twister tore up a road side fruit stand on El Camino near Bernardo Avenue. This time the first call to the Sunnyvale Public Safety Office was from Mike Colliander KE6MDW who heard a call for help during the afternoon commute on 2 meters. The Office of Emergency Services was activated in Los Altos to help with communications when the police and fire departments lost power. Hams who would ordinarily check into the SPECS Net suddenly found themselves in a real emergency. This is a reminder to always keep your batteries charged and your radios at hand. Emergencies, by their very nature, almost always occur without prior warning. Fortunately, there were no deaths and only one injury, but there was extensive damage to many homes and vehicles.

Unfortunately, jammers were active during the emergency. The FCC needs to enforce its own rules and apply fines to stop this type of anti-social behavior. The fine for interfering with emergency communications is \$10,000. I won't hold my breath waiting for this to happen, though. The FCC doesn't seem to care a bit about amateur radio. The new management of the FCC is mostly attorneys who want to sell the spectrum as a profit center.

Several stations were heard during the emergency on 2 meters, without ham ID, using terms such as "What's your 20?" and other CB jargon. A \$90 HT is more effective into a repeater than a \$200 CB rig operating simplex. Now that non-ham retail stores are selling inexpensive amateur HT's, this may become more of a problem. The problem can only grow as the sunspot cycle heats up and there aren't enough channels left on CB (not that all jammers are CBers, but many appear to be).

Now is a good time to consider making a simple radio direction finding antenna to help locate and reconcile interlopers. Since an ounce of prevention is worth a pound of cure, this is also a good time to become proactive and encourage CBers to learn about amateur radio, get licensed and join our ranks. Remember the Revolutionary cry, "The price of freedom is everlasting vigilance".

Special Pacific Division Update Date: 98-05-08 22:28:59 EDT

jmaxwell@netcom.com (james a maxwell)

## 70 CM BAND THREATENED BY LAND MOBILE SERVICE PETITION

On April 30, 1998, the FCC put on notice for public comment a Petition (RM 9267) filed by the Land Mobile Communications Council (LMCC) seeking, among other things, "immediate....reallocation of 420-430 MHz, paired with 440-450 MHz, from Federal use to PMRS [Private Mobile Radio Service]". The LMCC is a loose affiliation of organizations with interests in (mostly private) land mobile communications.

The ARRL is actively organizing opposition to this petition. The purpose of this special Update is to spread the word within the ARRL Pacific Division, and to encourage all to write to the FCC in opposition to this proposal.

As background, the 70 CM band is the second most popular of the Amateur Radio Service's VHF/UHF allocations, with substantial FM repeater and other operation in the 440 to 450 MHz segment and a variety of uses in the 420 to 430 MHz segment. Amateur Radio now enjoys the use of 420 to 450 MHz on a secondary basis to the Federal Government. The proposal would transfer the primary allocations between 420 and 430 MHz and 440 to 450 MHz from the government to the PMRS. Amateur radio would retain secondary status in the segments, and the 430 to 440 MHz allocation would remain unchanged. However, a primary assignment to PMRS from 420 to 430 and 440 to 450 MHz has the potential for a significant impact on amateur operations in those segments.

The petition notes that land mobile already has access to 420-430 MHz in three cities along the Canadian border, the result of a move by Canada at the time of WARC-79 to reallocate that part of the band from amateur to land mobile. The petition makes brief reference to expected "reduction in military use of this band" and to Wind Profiler use of 449 MHz, which according to LMCC "should be discouraged or at least minimized, in favor of higher frequency operation (e.g. 915 MHz), if reallocation to PMRS is considered."

The petition notes that "The band is generally popular with radio amateurs, currently on a secondary basis, with repeater use in 440-450 MHz and satellite links and amateur television in 430-440 MHz" and says, "Amateur applications in the 420-430/440-450 MHz should remain secondary to PMRS."

Comments on this petition are due in hard copy format only by June 1, 1998. No e-mail comments will be accepted. Reply Comments are due in hard copy format only by June 15, 1998.

Submit your hard copy comments by June 1, 1998, to the following address:

RM 9267 Secretary Federal Communications Commission 1919 M St., NW Washington, DC 20554

The Petition is 75 pages long, and reportedly will NOT be put up on the FCC WWW site.

In the Petition there are four key pages affecting the Amateur Radio Service—pages 28 - 31. These pages will soon be available from the Pacific Division WWW site at pdarrl.org and in straight ASCII via e-mail from me. Conversion of the hard copy text from FCC via ARRL Headquarters is by Glen Lokke, KE6NBO, of the Pacific Division team

-thanks, Glen!
